

ABSTRACT OF THE DISCLOSURE

0001079307400

An apparatus for facilitating optimization
5 processing in a compiler includes a language-specific-
rule table which stores one or more predetermined rules
which are specified for one or more programming
languages; an analyzing unit which analyzes a program
code which includes one or more instructions, and is
10 described in one of the one or more programming
languages, based on the one or more predetermined rules,
to obtain an analysis result; and an embedding unit
which embeds the analysis result in the program code.
